Current Topics in Malaria (Rodriguez-Morales) 490p, 2016

This book tries to update the significant epidemiological and clinical research in many aspects with a multinational perspective.

Malaria is still the main vector-borne parasitic disease in the world. Fortunately, elimination of this disease was achieved in multiple countries during the last decades. During the last decade, a significant reduction of malaria in the Americas was achieved. Nevertheless, many challenges still are ahead in order to reach a higher control and to continue in the elimination toward a world free of malaria in the next decades.

This book with 20 chapters is organized into 5 major sections: (I) Clinical and Epidemiological Aspects, (II) Basic Science, (III) Therapeutics and Antimalarials, (IV) Vaccines, and (V) Entomology and Vector Control.

Contents
Preface
1 Tertian Fevers in Catalonia in the Late Eighteenth Centuries: The Case of Barcelona (1783–1786)
2 Transyears Competing with the Seasons in Tropical Malaria Incidence
3 Malaria in Pregnancy
4 Challenges of Managing Childhood Malaria in a Developing Country: The Case of Nigeria
5 Multiple Organ Dysfunction During Severe Malaria: The Role of the Inflammatory Response
6 Severe and Complicated Malaria due to Plasmodium vivax
7 The Biology of Malaria Gametocytes
8 Structure and Functional Differentiation of PfCRT Mutation in Chloroquine Resistance (CQR) in Plasmodium falciparum Malaria
9 New Approaches for an Old Disease: Studies on Avian Malaria Parasites for the Twenty-First Century Challenges
10 Approaches, Challenges and Prospects of Antimalarial Drug Discovery from Plant Sources
11 Inactivation of Malaria Parasites in Blood: PDT vs Inhibition of Hemozoin Formation
12 Identification and Validation of Novel Drug Targets for the Treatment of Plasmodium falciparum Malaria: New Insights
13 Identifying Antimalarial Drug Targets by Cellular Network Analysis
14 Tackling the Problems Associated with Antimalarial Medicines of Poor Quality
15 The Next Vaccine Generation Against Malaria: Structurally Modulated Plasmodium Antigens
16 Pre-Erythrocytic Vaccine Candidates in Malaria
17 Enabling Vaccine Delivery Platforms and Adjuvants for Malaria
18 Exploiting the Potential of Integrated Vector Management for Combating Malaria in Africa
19 Resting Behaviour of Deltamethrin-Resistant Malaria Vectors, Anopheles arabiensis and Anopheles coluzzii, from North Cameroon: Upshots from a Two-Level Ordinary Logit Model
20 Secondary Malaria Vectors of Sub-Saharan Africa: Threat to Malaria Elimination on the Continent?
